Titan HST Launches NextGen 911 Life Saving Technology for Emergencies

September 15, 2016, Newport Beach, Calif. – Vic A. Merjanian, Founder and CEO of Titan Health & Security Technologies, Inc., today announced the launch of **Titan HST** its patent-pending **Next Gen 911** two way emergency communications platform for law enforcement, campus administrators and users. The ground breaking mobile app and web platform enables users to instantly communicate campus emergency alerts, lockdowns and broadcasts, survey users for their safety status and location, deliver real time instructions to individual users, and provide site-specific emergency materials.

“The response to mass shootings and terrorism on college campuses and elsewhere has been tragically inadequate. First responders spend precious time trying to understand the situation and respond appropriately while the terror unfolds. Lives are saved when response time is reduced and communications are two way and in real time between police, fire, emergency medical responders, the administration and potential victims”, according to Vic A. Merjanian.

Titan HST dramatically improves emergency response capacity, and reduces administration response time by 50 percent on average, while integrating **Privacy-by-Design**. Natural emergencies such as impending tornados or floods can be broadcast and continuously updated, delivering life-saving instructions. And a medical emergency, heart attack, drug overdose etc., can be instantly reported by any user, dramatically impacting the timing and efficacy of the medical response.

Titan HST is a powerful, secure and reliable application of new technology, Crowdsourcing. During an alert, users can communicate relevant emergency information, including their GPS coordinates, text, audio and pictures, as well as classify the type of emergency. In addition, users have the ability to speak with administrators and emergency personnel via redundant communication over cellular, wifi and LAN connections maximizing connectivity during an emergency. Administrators and emergency personnel receive emergency alerts via push notification, text message, web pop-up, email, and can communicate directly with users and send lockdown notifications and broadcast messages to the entire site as well as poll users for safety status and location to provide enhanced situational awareness.

[About Titan Health & Security Technologies, Inc.](#)

Titan HST (www.titanhst.com) is a patent-pending internationally accessible, multi-lingual, customizable, mobile two way emergency system. **Titan HST's** interdisciplinary team includes industry

leaders with deep relationships in target markets which include any public or private, government or non-governmental organization concerned about safety. The corporation is headquartered at 500 Newport Center Drive, Suite 950, Newport Beach, CA 92660. To interview Vic A. Merjanian, Esq., Founder and CEO, please contact Gary Douglas at 310.592.3049 or gary@douglasstrategic.com.
